Description

The AMPure® PB product is specially formulated for Pacific Biosciences’ SMRT® Sequencing workflow. It utilizes an optimized buffer to selectively bind DNA fragments 100 bp and larger to paramagnetic beads to facilitate DNA purification and cleanup. Excess primers, nucleotides, salts, and enzymes are removed using the purification procedure outlined in the Pacific Biosciences® Sample Preparation and Sequencing Guide. The resulting purified product is essentially free of contaminants, and the purification procedure is amenable to manual and automated workflows.

Components include:

<table>

Part Number

100-265-900

Quantity

5 mL

Intended Use

For Research Use Only. Not for use in diagnostic procedures.

Certain notices, terms, conditions and/or use restrictions may pertain to your use of Pacific Biosciences® products and/or third party products. Please refer to the applicable Pacific Biosciences Terms and Conditions of Sale and to the applicable license terms at http://www.pacificbiosciences.com/licenses.html

Storage and Handling Requirements

Product is shipped at ambient temperature and should be stored refrigerated (2 to 8 °C) upon receipt. Mix the reagent well before use. It should appear homogenous and consistent in color.

Shelf Life

The AMPure® PB product can be stored or used up to the expiration date on the bottle label.
